Apple Updates Today January 23, 2023

Apple has released updates to most of its products today.

iOS 16.3, iPadOS 16.3, Ventura 13.2, iOS 15.7.3

Few features.   Security fixes.   More products may soon follow.

Apple TV 16.3   Safari 16.3

Whether you're a junior analyst or chairman of the board, there's an Apple 32 SuperMicro to meet your needs and budget.

Macintosh

If you're a manager, professional, or businessperson, take a close look at the Macintosh personal computer.

With a 32-bit microprocessor, bit-mapped graphics, and mouse, it offers the advantages of the Apple 32 SuperMicros at a price that's nothing short of incredible.

For analysis, project management, graphics, writing, and much more, this fully transportable, personal productivity tool sets a new standard for the industry.

Lisa 2

Managers, professionals, and businesspersons with greater computing needs owe it to themselves to consider Lisa 2.

If you work with large financial models or extensive word-processing documents, this unique SuperMicro gives you a huge 512 kilobytes of memory capacity (that's enough room to work with over one-half million characters of data).

Macintosh programs run on Lisa 2, taking advantage of many of Lisa's additional capabilities. And giving you access to scores of programs from Apple and numerous independent developers.

Lisa's expandability means the system can grow with your business. For example, adding a hard-disk drive and more memory brings Lisa's fully integrated applications to your fingertips.

Lisa 2/5

If you're looking for a low-cost, hard-disk system, you can get it with Lisa 2/5.

Lisa 2/5 includes a 5-megabyte external hard-disk drive, so all your application programs and data files can be stored in one place.

The system is perfect if you want to take advantage of the many programs created especially for Lisa by independent developers, as well as programs written for other operating systems.

In addition, by adding more memory, you can run Lisa's integrated applications. You'll be able to handle multiple applications at the same time. Print a document while working on another. Download information from a mainframe while doing other work on the screen. And much more.

Lisa 2/10

If you need the extra capacity of a 10-megabyte hard-disk drive, consider Lisa 2/10.

Lisa 2/10 gives you all the advantages of the Lisa 2/5—and then some. A built-in 10-megabyte hard disk replaces Lisa 2/5's external 5-megabyte hard-disk drive.

With Lisa 2/10, you can take maximum advantage of Lisa's integrated applications, as well as programs from independent developers and programs written for other operating systems, such as UNIX™.

No other personal computer comes close to Lisa 2/10 in power and performance. Or offers as much for the price.
